PRECISION - ACCURACY - INNOVATION

www.fhqtradingco.co.uk

INTRODUCTION

We are a customer focused company manufacturing Surgical & Dental Instruments in accordance with the German Manufacturing techniques and knowledge. The production department is well equipped with the modern automated machines and tools which ensures the same quality of instruments constantly.

The implementation of advanced production and managements software throughout the production cycle ensures the delivery of instruments as per committed delivery time and keeps track of each production step. The quality management system of the company is audited and certified by one of the world's top certification Bodies. In addition to thousands of general models, we are also developing customized models of instruments as per user requirements.

SPECIAL SURFACE TREATMENT

We have established a laboratory with all required testing chemicals and equipment. All of the instruments are passed through boil test and then special surface treatment process to ensure smooth, clean and homogenous surface of the instruments. This process maximizes the natural corrosion resistance property of stainless steel.

QUALITY CONTROL DEPARTMENT

We have established an independent quality control department which is equipped with the German testing equipments and well trained experienced staff. Each instrument is required to be passed through certain controlling processes before finally packed and shipped.

Our valued customers receive a Q.C Certificate with each lot that contains complete information about all Q.C parameters performed. This Certificate bears a Unique ID which can be used for traceability of all production processes from forging to packaging in our system and can be provided to customers as and when required.

Selection of Material

German, French or Japanese steel (round or flat) is used in general models whereas Pakistan steel may be used in disposable items, The selection of material depends upon the choice of customers as per their quality, price and market requirements. Material certificate issued by a recognized lab can be provided with each lot.

Production Process

Each production process is well defined and always documented under batch and lot numbers which can be tracked back as and when required within five years after production. The files, grinding/polishing wheels, milling cutters, drills and threading taps are mostly imported from Germany to stay ahead in technological competition.

Precision and Accuracy

Technical AutoCAD Drawings and Go/No Go Gauges are made through CNC machines which are used throughout the manufacturing cycle. This ensures the delivery of precise and accurate instruments, constantly and smoothly.

Why?

FHQ Trading Co

Manufacturing process in accordance with the German manufacturing techniques & Knowledge

Accurate and precise instruments with fixed minimal tolerances as per DIN Norms

Constant, same quality of instruments every time

Keeping promised delivery time supported with consistent communication

CE, ISO 13485 and ISO 9001 Certified

Highly professional customer services supported by regular personal visits of the Top Management
